Visual hierarchy and readability

- The "Bad" card uses a very strong yellow image and yellow button that dominate the screen, so text and controls feel secondary and are harder to read.

- The "Good" card uses a calmer gradient, better contrast, and more white space, so the product title, description, price, and buttons are easier to scan in order.

Consistency and alignment

- In the "Bad" card, elements like color selector, quantity, stars, and buttons feel loosely placed with inconsistent spacing and alignment.

- In the "Good" card, items are aligned along a clear grid, spacing is consistent, and related elements (price + rating + buttons) sit together logically. **Emphasis on primary action**

- The "Bad" card uses very bright fills behind both "Add to cart" and "Add to Wishlist," making it unclear which is the main action.

- The "Good" card gives stronger visual weight to the primary button (solid fill) and a lighter treatment to the secondary button (outline), clarifying what the user should click first.

Use of affordances and feedback

- The "Bad" card omits helpful cues like a favorite icon, image pager, or rating at the top, so it feels flat and less interactive.

- The "Good" card adds icons (favorite heart, "PRO" label, slider dots, rating stars) that signal functionality and build trust. **Overall aesthetics and usability**

- The "Bad" design feels cluttered and visually heavy near the bottom (bright ovals, scattered stars), which can distract and tire the user.

- The "Good" design is cleaner, more balanced, and more modern, which usually leads to better user trust and easier decision-making.
