

These wireframes provide a rock-solid front-end shell to start plugging in the LSTM-based summarization and fake news detection algorithms you have been developing for this project.

98% VERIFIED

The news headline (Max 2 lines)

The 60-word summary. This is a placeholder for the actual summary text, which will be approximately 60 words long to provide a concise overview of the news article.

Why it matters:

This is a single sentence explanation.

User Name

Bookmarks

History

Settings

Enable Smart Offline Cache

Auto-downloads top 20 daily shorts for offline reading.

Procedure:

- **Tool Used:** Balsamiq Wireframes (<https://balsamiq.com>)
- I created a new project and added mobile screens to simulate the user's news consumption experience, focusing on quick reading, AI-driven contextual insights, and a vertical swipe interface.
- Each screen represents a key step in onboarding, browsing automated news summaries, and deep-diving into verified articles.
- UI components like swipeable cards, text boxes, category chips, image placeholders, and custom icons (such as a Credibility Meter) were arranged using Balsamiq's built-in library.
- All wireframes were designed to be minimalist, clean, and entirely focused on distraction-free user interaction and fluid content delivery.

User Flow:

- **Onboarding Screen** - Users select their topics of interest (e.g., AI, Tech, Local News) to initialize their personalized feed.
- **Main Feed Screen** - The core swipeable interface displaying the 60-word news shorts, relevant imagery, and real-time credibility scores.
- **Deep Dive Screen** - A detailed, expanded view of a selected news item providing bulleted analysis and a link to the original source.
- **Profile & Settings Screen** - Allows users to manage saved articles, view reading history, and configure offline caching.

Screen-by-Screen Breakdown

- **The Onboarding Screen:** The chip-based design for topic selection is frictionless. It is a great way to immediately initialize a personalized feed without forcing the user through a long questionnaire.
- **The Main Feed:** The visual hierarchy here is spot on. The eye naturally moves from the image placeholder down to the headline, and the 60-word summary is neatly contained. Placing the "98% VERIFIED" credibility meter right above the headline is a great touch to immediately establish trust. The "Why it matters" callout box also stands out just enough to offer context without cluttering the swipe interface.
- **Deep Dive & Profile:** The transition to bulleted points in the Deep Dive screen keeps the cognitive load low for users who want a bit more information, and the "Smart Offline Cache" toggle in the profile is perfectly placed for easy access.
